

U.S. 30 at Rand Road Intersection Improvements

Project Fact Sheet

The Oregon Department of Transportation and the City of Hood River are working to rebuild the intersection of U.S. 30 (Cascade Avenue) and Rand Road.

The project will realign the intersection, add a traffic signal, add missing sidewalks, provide curb ramps accessible to people with disabilities, improve stormwater drainage, and add new street-lighting. These changes will increase safety, improve traffic operations, and improve accessibility for all travelers.

Project Need

It is currently difficult for people to cross U.S. 30 (Cascade Avenue) on foot due a lack of marked crossings and signals west of 13th Street. At Rand Road, a section of missing sidewalk on the southwest corner of the intersection requires pedestrians to walk on the highway shoulder or cut through a private parking lot.

The intersection also has a history of vehicle crashes. The offset between the north and south approaches to the intersection (Rand Road) make it difficult for vehicles to cross and turn safely.

Solutions

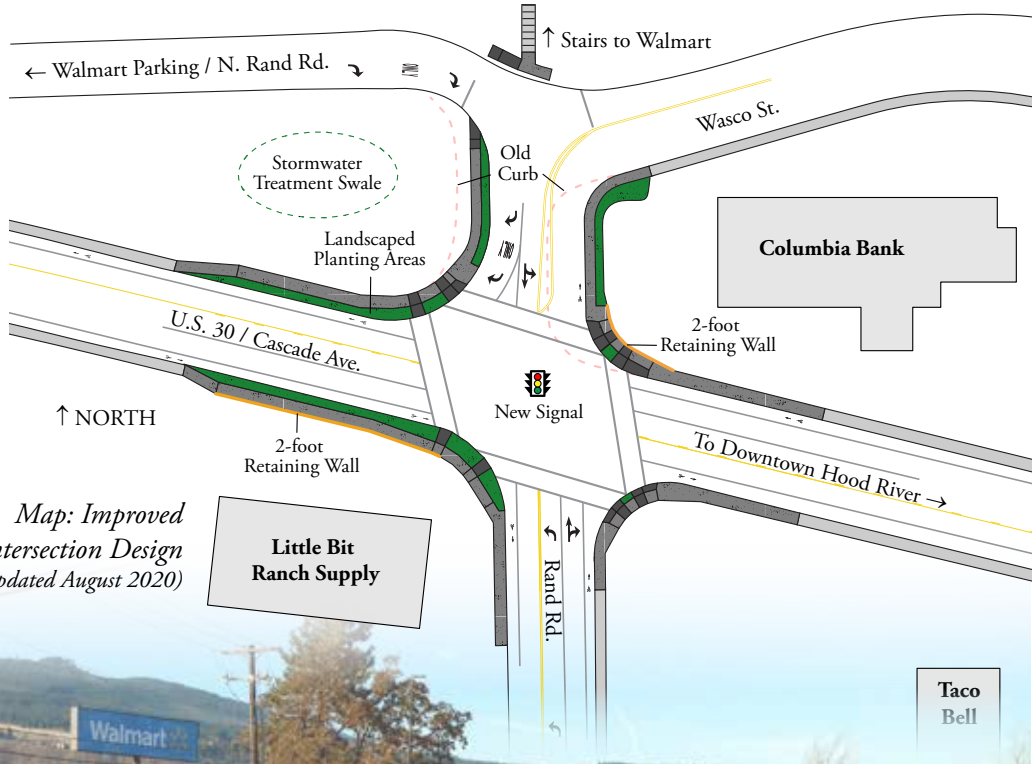

The project will line up the north and south approaches to the intersection, install a new traffic signal, and add marked pedestrian crossings.

Minimal Construction Impacts

The project team will be working closely with immediate neighbors to address access and property concerns. Minimal impacts to roadway users are expected. During construction, drivers and cyclists can expect to see flaggers directing traffic, temporary lane shifts, and some delays due to single-lane closures on U.S. 30. Temporary pedestrian detours will be posted. No significant nighttime work is expected.

Schedule

- **Design:** continues through spring 2021.
- **Construction:** fall 2021 until spring 2022.
